-----

This project significantly enhances the use of solar technology in rural Burkina Faso and establishes quality standards in ...

The new operation aims to address the challenges facing Burkina Faso's education sector by expanding access to preprimary and primary education, improving learning outcomes, and ...

In Burkina Faso, Architects are revolutionizing school buildings to be cooler and eco-friendly despite the country's extreme heat, ...

In a country where access to reliable electricity is limited, the potential for renewable energy to transform education is immense. This project will focus on solar energy, which is abundant in ...

Under President Ibrahim Traore, soldiers, engineers, teachers, and villagers worked side by side under the Sahel sun. Using locally designed modular classrooms, powered by solar energy ...

In Burkina Faso, Architects are revolutionizing school buildings to be cooler and eco-friendly despite the country's extreme heat, which can reach up to 40 degrees Celsius (or ...

The "Lighting Africa" project aims to promote solar technology and its quality standards, through the creation of "solar libraries" in 400 off-grid primary schools in Burkina Faso.

By combining solar technology with local capacity building, this project not only supports digital learning but also strengthens energy resilience in the region.

An internal evaluation showed that the project is having a positive impact so far: reduced firewood use,
