Flow batteries can be classified using different schemes: 1) Full-flow (where all reagents are in fluid phases: gases, liquids, or liquid solutions), such ...

In this work, a cradle-to-gate life cycle assessment (LCA) is conducted to determine the potential life cycle impacts of producing a VRFB prototype developed at LEPABE.

The vanadium redox flow battery systems are attracting attention because of scalability and robustness of these systems make them highly promising.

Flow batteries can be classified using different schemes: 1) Full-flow (where all reagents are in fluid phases: gases, liquids, or liquid solutions), such as vanadium redox flow battery vs semi ...

The data reported in this work represent the best charge-discharge performance, the highest peak power density, and the longest ...

The longevity and cycle life of vanadium flow batteries stand out prominently. These batteries can endure over 10,000 charge-discharge cycles without significant degradation.

Thus, the assessment of potential environmental impacts of VFBs by life cycle assessment (LCA) is essential in order to support a sustainable energy system. The presented ...

The data reported in this work represent the best charge-discharge performance, the highest peak power density, and the longest cycle life of flow batteries reported in the ...

Our batteries perform tens of thousands of cycles over decades, with no fundamental capacity degradation or need for replacement. Replacing batteries is expensive and wasteful.

This study demonstrates that the incorporation of 1-Butyl-3-Methylimidazolium Chloride (BmimCl) and Vanadium Chloride (VCl<sub>3</sub>) in an aqueous ionic-liquid-based electrolyte ...

As different innovations in this field of technology are still under development, reproducible, comparable and verifiable life cycle assessment studies are crucial to providing ...

In the present life cycle assessment (LCA) study, potential environmental impacts of a VFB are evaluated. The study is based on an in-depth ...
