Are double-glass PV modules durable?

Double-glass PV modules are emerging as a technology which can deliver excellent performance and excellent durability at a competitive cost. In this paper a glass-glass module technology that uses liquid silicone encapsulation is described. The combination of the glass-glass structure and silicone is shown to lead to exceptional durability.

What is a dual-glass module?

Dual-glass type modules (also called double glass or glass-glass) are made up of two glass surfaces, on the front and on the rear with a thickness of 2.0 mm each. Some manufacturers, in order to reduce the weight of the modules, have opted for a thickness of 1.6 mm. Dualsun has chosen to stay with a thickness of 2.0 mm for reasons explained below.

What is the bifaciality of a double glass module?

Bifaciality: The bifaciality of double glass modules produces a gain of around 10-11% compared to the power measured on the front panel alone, for TOPCon type modules under so-called BNPI (bifacial nameplate irradiance) test conditions.

Why is double glass important for solar panels?

Double Glass is especially important in photovoltaic facilities such as solar power plants and with the expected long service life of modules such as AKCOME, Jinery or Jollywood. Why solar panels with glass-glass technology? Why is solar double glass more durable?

In this paper a glass-glass module technology that uses liquid silicone encapsulation is described.

Compared to traditional single glass modules, double glass modules offer significant advantages, particularly in terms of efficiency and durability. The rear glass layer can absorb reflected light, ...

Double-glass solar modules are made up of two layers of tempered glass that cover both sides of the solar panel. As snow accumulates on a typical solar panel or people ...

There are frameless double glass modules that reveal the back side of the cells, but are not double-sided. True bifacial solar panel have contacts / busbars on both the front and rear of ...

Specifications included in this datasheet are subject to change without notice. Version number: TSM_EN_2023_PA2

N bifacial dual glass Monocrystalline module PRODUCT: TSM-NEG21C.20 PRODUCT RANGE: 695-720W

The glass-glass modules are suitable for buildings with demanding architectural requirements, verandas & carports, photovoltaic fences as ...

N bifacial dual glass Monocrystalline module PRODUCT: TSM-NEG20C.20 POWER RANGE: 625-650W

The Double Glass is a versatile choice that combines aesthetics and high performance. Double Glass module is suitable for both residential and commercial buildings. In addition to their ...

Double glass modules, due to the hermeticity of their structure, present less risk of PID. This phenomenon can be avoided by the use of an appropriate encapsulation material and by ...

The glass-glass modules are suitable for buildings with demanding architectural requirements, verandas & carports, photovoltaic fences as well as for areas subject to significant snowfall.
