With the new law, Brazil now offers a fertile environment for storage solutions in multiple segments: Backup, self-consumption, solar integration, preparation for electric vehicles.

Brazil's Energy Storage Association (ABSAE) predicts that the country's energy storage capacity will reach 25 GW by 2030, attracting \$8.46 billion in investment. In 2025, ...

The rising demand for battery energy storage systems (BESS) is primarily fueled by the need to enhance grid stability and integrate intermittent renewable sources like wind ...

The Brazilian electricity sector is experiencing a paradox: while the need for flexibility in the grid is growing - pressured by the expansion of renewables such as solar and ...

The government has delayed auctions for new transmission lines and energy storage, so relief may not come soon. Experts say new lines could take up to a decade to build.

Target audience: Solar/wind developers, battery manufacturers, policy wonks, and investors eyeing Latin America's largest economy. What's in it for you: A front-row seat to ...

The auction aims to boost Brazil's grid reliability by integrating energy storage for wind and solar power. Brazil is set to conduct its first auction for adding batteries and storage ...

Wind and solar power generated more than a third of Brazil's electricity in August. This marks the first time these renewable sources have crossed that threshold, according to ...

But here's the kicker: droughts are making reservoirs unreliable, while wind and solar installations are exploding across the Northeast. The real question isn't whether Brazil should adopt ...

Brazil's new 2025 energy storage regulations create urgent opportunities for businesses to pair solar with lithium batteries. Here's why: Overloaded grids cause ...

The Brazilian electricity sector is experiencing a paradox: while the need for flexibility in the grid is growing - pressured by the ...
