---

**Summary:** Kinshasa, the capital of DR Congo, faces significant electricity challenges. This article explores the growing demand for outdoor power solutions like solar generators and portable ...

According to the Economic Commission for Africa, electricity demand in Central Africa is expanding at nearly five percent annually, driven by urbanisation and cross-border ...

Many urban and rural areas experience frequent power outages, leading to a heightened sense of urgency among residents to secure dependable energy sources. The ...

This infographic summarizes results from simulations that demonstrate the ability of Congo to match all-purpose energy demand with wind-water-solar (WWS) electricity and heat supply, ...

Oil pipelines and a 487 MW plant brighten Congo's exports, yet nearby villages remain off-grid. We examine government strategy, funding and community expectations.

From remote mining camps to vital telecom infrastructure, Congo's outdoor energy storage market is powering sustainable development. By combining solar generation with smart storage, ...

Between 2023 and 2024, power output in the Democratic Republic of Congo (DRC) rose by 303.1 gigawatt-hours (GWh) or 3.04%. According to the ...

Electricity production cannot keep up with demand, and the distribution system suffers from old, failing infrastructure. However, the government's policy of strictly controlling ...

Between 2023 and 2024, power output in the Democratic Republic of Congo (DRC) rose by 303.1 gigawatt-hours (GWh) or 3.04%. According to the country's power utility, the ARE, hydropower ...

The DRC suffers from a lack of information about all aspects of power demand, which magnifies the challenge of planning. The mere scale of the DRC and accessibility challenges make ...

Distribution of wind potential Annual generation per unit of installed PV capacity (MWh/kWp) Wind power density at 100m height (W/m<sup>2</sup>)
