This innovative tool systematically catalogizes all energy storage projects within Europe, from the first planning phase to operational operation.

The European Commission in 2020 published a study on energy storage, which summarized some previous studies and reports, explored current and potential energy storage ...

With solar energy mainstreaming across the continent, now is the time for European decisionmakers to put batteries at the centre of a flexible, electrified, energy system.

As Europe continues its transition to a more sustainable and resilient energy system, energy storage remains a critical enabler of renewable energy expansion. The report ...

In March 2025, the Commission launched the European Energy Storage Inventory, a real-time dashboard that displays energy storage levels across different European countries. ...

The goal is to list all planned and operational energy storage projects in Europe by location and technology. The dashboard can be filtered by country, project status and technology.

Energy storage systems are key for balancing supply and demand, ensuring grid stability, and improving energy efficiency. By offering real-time energy storage data, this tool ...

The goal is to list all planned and operational energy storage projects in Europe by location and technology. The dashboard can be ...

The EU, UK, Norway, and Switzerland together are expected to reach 100 GW of installed energy storage later this month, according to new analysis launched at the Enlit ...

A new interactive platform--the European Energy Storage Inventory --has been launched to provide near real-time insights into energy storage deployment across the EU, ...

The report, "Overview of Energy Storage Deployment in Europe," details the accelerating growth of adoption across a variety of technologies, including mechanical ...
