Pumped hydro is the most widely used technology for energy storage in Europe and worldwide, but batteries and hydrogen have come into the spotlight over the last decade ...

As Europe accelerates its transition to a decarbonised energy system, energy storage has rapidly emerged as a cornerstone of this transformation. Once a niche technology, ...

The European Commission has announced a European Grid Package, to be launched in the final quarter of the year, which will focus on driving energy storage capacity to ...

A new interactive platform--the European Energy Storage Inventory --has been launched to provide near real-time insights into energy storage deployment across the EU, ...

With this initiative, the EU underlines the central importance of energy storage technologies for the successful implementation of the European climate protection goals and ...

Discover the evolving policies and regulations of the European Union and United Kingdom, with both issuing landmark legislation in the ...

The latest edition of the European Market Monitor on Energy Storage by the European Association for Storage of Energy and LCP Delta, released on 31 March, highlights ...

Together to accelerate the decarbonisation of the European energy system by increasing the deployment of sustainable and clean energy storage solutions to support renewables.

The European Commission has announced a European Grid Package, to be launched in the final quarter of the year, which will focus ...

The main energy storage method in the EU is by far "pumped storage hydropower", which works by pumping water into reservoirs when there is an electricity surplus in the grid - ...

A total of 11.9GW of energy storage across all scales and technologies was installed in Europe in 2024, LCP Delta has said.

Discover the evolving policies and regulations of the European Union and United Kingdom, with both issuing landmark legislation in the energy storage.
