Why should European inverter manufacturers invest in ipcei?

European inverter manufacturers are facing pressure and growing competition. A quickly implemented IPCEI will stimulate an innovative and sustainable investment leap forward,empowering Europe to keep pace with the rest of the world.

Why do we need a European inverter ecosystem?

European inverters have a critical opportunity to further tap into the technological advancements needed for the electrification and digitalisation of the energy system. The IPCEI aims to ensure that the EU inverter ecosystem maintains an innovation edge, globally. Also see: Inverters as interface of the energy transition

How many solar inverters are there in Europe in 2023?

In 2023,there was equivalent of 82.1 GWof solar inverter manufacturing capacity in the EU (compared to around 60 GW of solar installed in the same period). - While some EU inverter companies keep growing and announcing reinvestment plans,their relative market share in Europe is shrinking.

Why should we build on the success story of European inverters?

Dries Acke, Deputy CEO and Policy Director at SolarPower Europe said, "We need to build on the success story of European inverters. The electrification wave is a critical opportunity for Europe's inverters to seize the innovation edge and establish a competitive global market share.

SolarPower Europe published its initial proposal for an IPCEI to support inverters in June 2024, along with our latest market analysis on European inverter manufacturing.

By securing IPCEI status, the industry hopes to mobilize significant public and private investments, driving advancements that could solidify Europe's leadership in this ...

The initiative aims to ensure that European inverter manufacturers can leverage technological advancements essential for the electrification and ...

European inverter manufacturers are facing pressure and growing competition. A quickly implemented IPCEI will stimulate an ...

Right now, Europe can take up this opportunity to entrench its world-leading spot in inverters that go the extra mile - supporting the grid and securing cyber-preparedness.

European regions experiencing increased extreme weather events have recognised the value of solar-powered emergency communication networks. Many ...

This paper presents a European-wide techno-economic and environmental assessment of retrofitting 5G macro-cell base stations with grid-connected solar photovoltaic ...

Solar energy containers encapsulate cutting-edge technology designed to capture and convert sunlight into usable electricity, particularly in remote or off-grid locations. ...

The existing communication technologies, protocols and current practice for solar PV integration are also introduced in the report. The survey results show that deployment of communication ...

European inverter manufacturers are facing pressure and growing competition. A quickly implemented IPCEI will stimulate an innovative and sustainable investment leap ...

Inverters | Replacing outdated inverters can significantly boost the yield of a PV power plant and rectify equipment failures. Jorn Carstensen of Germany-based greentech looks at the ...

The initiative aims to ensure that European inverter manufacturers can leverage technological advancements essential for the electrification and digitalization of the energy system.
