If the future is the result of a call to `async` that used lazy evaluation, this function returns immediately without waiting. The behavior is undefined if `valid()` is false before the call ...

In 2024, rooftop solar was the fastest-growing source of electricity worldwide, according to data from the U.S. Energy Information Administration. Yet many homeowners still ...

A future represents the result of an asynchronous operation, and can have two states: uncompleted or completed. Most likely, as you aren't doing this just for fun, you actually ...

Explore the smart solar home of the future. Our 2025 guide covers the next wave of solar tech: perovskite cells, bifacial panels, AI energy management, and VPPs.

The promise is the "push" end of the promise-future communication channel: the operation that stores a value in the shared state synchronizes-with (as defined in ...

In 2024, rooftop solar was the fastest-growing source of electricity worldwide, according to data from the U.S. Energy Information ...

Learn about incentives, financing, and tips for installing solar at residential and commercial properties.

From perovskite cells to bifacial panels and AI-powered optimization systems, these innovations are making solar power more efficient, affordable, and accessible than ever ...

This article explores the latest changes in solar technology, cost reductions, and smart innovations that make solar power for home more accessible and efficient than ever before.

In summary: `std::future` is an object used in multithreaded programming to receive data or an exception from a different thread; it is one end of a single-use, one-way ...

Several mapping services and tools are available to help you determine your home's solar energy potential. Some of the services also offer information on the estimated system size, potential ...

`future (const future &) = delete; ~future (); future & operator =(const future &) = delete; future & operator =(future & &) noexcept; shared_future <R>; share () noexcept; // ...`
