-----

India's continued commitment to achieving the clean energy transition is well recognized worldwide. At COP26, India announced the highly ambitious goal of decarbonizing energy to ...

India's renewable energy transition refers to the shift from fossil-fuel-dominated power generation to a low-carbon system driven by solar, wind, hydro, and storage, supported by ...

Solar and wind power with 4-hour battery storage systems, as a source of dispatchable generation compared with new coal and new gas plants, is already cost-competitive in India ...

The challenge with Renewable Energy sources arises due to their varying nature with time, climate, season or geographic location. ...

India aims to install 500 GW of non-fossil capacity by 2030, with renewables expected to supply roughly 50% of total generation. Such variable resources demand flexible ...

In every conversation -- from Delhi's smart grid pilots to Ladakh's gigawatt-scale solar park -- Battery Energy Storage Systems (BESS) have emerged as the backbone of ...

Three initiatives, regulations or policies related to decentralised energy storage have been updated or introduced by the relevant agencies at the national or state level.

major disruptor in India's power market in the 2020s. ESS will attract the highest Pumped hydro is dominating the investment of all emerging ESS market, accounting for more sectors as ...

The challenge with Renewable Energy sources arises due to their varying nature with time, climate, season or

geographic location. Energy Storage Systems (ESS) can be used ...

Dramatic cost reductions over the last decade for wind, solar, and battery storage technologies position India to leapfrog to a more flexible, robust, and sustainable power system for ...

Yet, even as non-fossil capacity surged ahead of schedule, industry leaders warn that grid readiness, storage deployment, and system-level planning are struggling to keep ...
