The Shahed-136 drone has primarily been linked to Iran, but its use has extended beyond its borders. Countries like Russia have ...

Discover how Iran's Shahed drones are reshaping asymmetric warfare with low-cost, long-range, and scalable attack capabilities.

The Czech engine manufacturer denied these allegations, emphasizing that the engines used in Iranian drones are not their products, as confirmed by a 2020 UN panel of experts.

Shahed-136 munitions used by both Iran and Russia have also been documented using a honeycomb structure inside their wings--probably to reduce the likelihood of detection by radar.

But where are these drones now? Are they deployed on the battlefield, or are they being used for more clandestine purposes? In this article, we'll take a deep dive into the world of Iranian ...

On 3 December 2025, the U.S. military announced it had developed the LUCAS drone, a clone of the Shahed 136, and deployed a squadron in the Middle East. The aircraft has a cropped delta ...

This product provides a visual comparison of UAVs used by Russian forces in Ukraine and Iranian UAVs used to attack U.S. and partner interests in the Middle East.

That said, the deployment of long-range drones from the Shahid Bagheri could enable Tehran to monitor

international waters and ...

Key Points - Several months ago, Iran accepted into service the IRGC Shahid Bagheri, a large container ship converted into an aircraft carrier of sorts, featuring a long, angled flight deck.

The Islamic Revolutionary Guard Corps Aerospace Force is the primary operator of Iran's growing fleet of UAVs, although most Iranian military services employ them.

Shahed-136 munitions used by both Iran and Russia have also been documented using a honeycomb structure inside their wings--probably to ...
