-----

Our N-type models have superior bifaciality. This means that the rear side of the module can produce up to 85% of the energy generated by the front ...

single glass modules with fully-tempered front glass have higher impact resistance and mechanical strength, and are less possibility to burst when used outdoors;

Our N-type models have superior bifaciality. This means that the rear side of the module can produce up to 85% of the energy generated by the front side. Thus, the panel generates more ...

N-type solar cells have a slightly different construction compared to traditional p-type solar cells. The main difference lies in the doping of the semiconductor material used in the cell.

Double-glass modules, with their performance in the face of salt mist, high temperatures and high humidity, have won the market's favour. However, this trend is not ...

The mainstream N-type TOPCon modules are encapsulated in glass on both sides. The double glass structure inhibits water vapor ...

CSI TOPCon modules are based on N-type silicon wafers with high minority carrier lifetime and higher open-circuit voltage. The higher open-circuit voltage, the better module temperature ...

Tiger Neo modules works with TOPCon cells, which have much lower degradation than PERC panels, more stable Due to the technical production and properties of N-type TOPCon cells as ...

Dual glass is the preferred structure for the rear side cover of the N-type modules because the glass-glass

version can maximize the advantages of the N-type.

The mainstream N-type TOPCon modules are encapsulated in glass on both sides. The double glass structure inhibits water vapor permeation more effectively than single ...

Bifacial with Double-Glass Module adopts 182\*199mm half cells, bifacialmodule provide an additional 5%~25% output.

Bifacial glass-glass module shows an excellent anti-PID and LID-free performance. Power output gains of bifacial module with n-type PERT solar cell are almost 7.6% on grass, ...
