---

Let's face it--North Asia's energy landscape is at a crossroads. With China's renewables capacity hitting 1,200 GW last quarter and Japan accelerating nuclear reactor restarts, you'd think ...

How will a new energy policy affect the energy sector? It will continue to support PPPs and independent power producers as vehicles for attracting private capital into the energy sector.

The AAPowerLink project is set to deploy between 17GW and 20GW of solar capacity and between 36.42GWh and 42GWh of energy storage to connect Australia's Northern Territory ...

Focusing on technological advancements, market evolution, and the current business case for storage, we will discuss how storage is already being used to support reliable power supply, ...

The government incentives have also contributed to the curtailment of solar energy, as many of the solar projects have been built in northern and ...

Imagine your smartphone dying during a video call - that's essentially what happens when power grids can't store renewable energy effectively. North Asia's new energy ...

While it is true that the development of China's energy storage industry has moved from a technical verification stage to a new stage of early commercialization, the industry still faces ...

The authors support defining energy storage as a distinct asset class within the electric grid system, supported with effective regulatory and financial policies for development and ...

Supporting policies ... The global installed solar capacity over the past ten years and the contributions of the top fourteen countries are depicted in Table 1, Table 2 (IRENA, 2023).

The government incentives have also contributed to the curtailment of solar energy, as many of the solar projects have been built in northern and western regions of China where there is a ...

With North Asian countries committing to 35% renewable integration by 2025, battery storage systems have become the linchpin of their climate strategies. Let's unpack what's driving this ...
