While Norway boasts a robust renewable energy sector dominated by hydropower, large-scale dedicated energy storage facilities ...

Operations are expected to begin this summer, including the first shipment of CO₂ from Heidelberg Materials' cement factory in Brevik, Norway, to a reservoir 2,600 meters ...

Now, a more mature Norwegian battery industry has greater potential to accelerate the renewable energy transition in Europe. Today Norway has not one, but two huge battery ...

While Norway boasts a robust renewable energy sector dominated by hydropower, large-scale dedicated energy storage facilities are still in their early stages of development.

Phase 1 of Norway's first carbon capture and storage project, which started operations in September 2024, can store 1.5 million tonnes of CO₂ annually, equal to the ...

Norway has officially launched Longship, the world's first complete carbon capture and storage (CCS) value chain - from industrial capture to permanent seabed storage.

TotalEnergies and its partners, Equinor and Shell, announce that the first CO₂ volumes were successfully transported by vessel from Heidelberg Materials' cement factory in ...

While the use of battery storage is on the rise, the current installed capacity remains relatively insignificant compared to hydro storage. To fully harness the potential of renewable energy, ...

While Norway once aimed to be the "battery of Europe" it has since been overtaken other Nordic countries

Sweden and Finland for ...

Norway aims to become one of the leading battery storage markets in the Nordic region, but Sweden and Finland have already surpassed Norway in deploying battery storage ...

While Norway once aimed to be the "battery of Europe" it has since been overtaken other Nordic countries Sweden and Finland for BESS deployments. Research firm ...

Phase 1 of Norway's first carbon capture and storage project, which started operations in September 2024, can store 1.5 million tonnes ...
