-----

Creating new solar farms will reduce emissions from fossil fuel-based electricity generation and is a vital step towards a green transition and energy independence. The Nordic ...

European Energy has secured EUR 37.9 million of long-term project financing for a hybrid solar and battery storage project in Saldus, Latvia. Once operational, it will be among ...

The renewable energy developer has raised EUR85 million in loans to construct four solar parks in Latvia, adding 329 MW of capacity to bolster regional energy security and ...

Latvia's Energy Strategy 2050 outlines major changes in renewable energy production and storage, with significant investments ...

As Latvia strengthens its commitment to renewable energy and energy independence, an increasing number of government-backed ...

It examines and scores six key areas: governance, incentives & support schemes, permitting procedures, energy sharing schemes, energy communities and additional measures to support ...

Strong growth in large-scale wind farms, solar installations and distributed energy systems. Rapid expansion of EV charging networks supporting domestic and Baltic mobility corridors.

Solar and wind energy production alone experienced an impressive 92% surge in 2023 compared to 2022, and this momentum shows no signs of slowing down. Building on these ...

The solar parks will be located in Valmiera, Kraslava, Madona, and Saldus municipalities, and will integrate

solar photovoltaic systems with wind power and battery ...

As Latvia strengthens its commitment to renewable energy and energy independence, an increasing number of government-backed subsidies and loan programs are ...

The solar parks will be located in Valmiera, Kraslava, Madona, and Saldus municipalities, and will integrate solar photovoltaic systems ...

The funding will support the development of four hybrid solar parks in Latvia, making it one of the most significant renewable energy projects in the country to date.
