-----

Dozens of large-scale solar, wind, and storage projects will come online worldwide in 2025, representing several gigawatts of new capacity.

This rapid deployment, backed by updated data from S& P Global Market Intelligence, suggests over 59 GW of new solar and wind projects are set to go live alongside ...

According to the report, China is set to account for almost 60% of all renewable capacity installed worldwide between now and 2030, based on current market trends and ...

Battery energy storage systems (BESS) have been the fastest-growing segment of the clean energy space in recent years, and ...

The rise of "electrotech" - solar, wind, batteries and electrified transport, heating and industry - became the dominant engine of global energy growth, led by China's ...

Explore what 2025 holds for clean energy--from solar and wind growth to storage innovations and grid modernization. Key insights from FFI Solutions.

During the first 10 months of 2025, solar and battery storage have dominated growth among competing energy sources. Further, all net new generating capacity in 2026 is forecast ...

If those plans are realized, solar would account for more than half of the 64 GW that developers plan to bring online this year. Battery storage, wind, and natural gas power ...

The landscape of energy in the United States is undergoing a significant transformation, with solar power and
