How can the Czech Republic become part of the European hydrogen market?

Second phase: Global Bridges (2030-2045) - focuses on the import of renewable hydrogen using a Europe-wide network of hydrogen pipelines. Planned projects such as the Central European Hydrogen Corridor and the Czech German Hydrogen Interconnector would enable the Czech Republic to become part of the European hydrogen market.

How will the Czech Republic contribute to the European hydrogen ecosystem?

Planned projects, such as the Central European Hydrogen Corridor and the Czech German Hydrogen Interconnector, will integrate the Czech Republic into the European hydrogen ecosystem. Importing renewable hydrogen is expected to reduce its price significantly. 3.

How can the Czech Republic become a hydrogen hub?

The Czech Republic also aspires to become a regional hub for hydrogen trade and innovation, collaborating with neighboring countries and integrating into European hydrogen corridors.

Is there a green hydrogen electrolyser in the Czech Republic?

In 2023, the first commercial green hydrogen electrolyser in the Czech Republic was put into operation in Napajedla (Zlínský region) by renewable energy developer Solar Global a.s. and is intended to be used primarily for energy storage. Other notable projects to produce green hydrogen in the Czech Republic planned for the next few years include:

Planned projects such as the Central European Hydrogen Corridor and the Czech German Hydrogen Interconnector would enable the Czech Republic to become part of the European ...

An electrolyzer in the town of Napajedla in southeastern Czech Republic has produced the country's first green hydrogen from ...

An electrolyzer in the town of Napajedla in southeastern Czech Republic has produced the country's first green hydrogen from solar power. The industrial green hydrogen ...
